GRIDPRINT analysis report

Verdict

VERIFIED

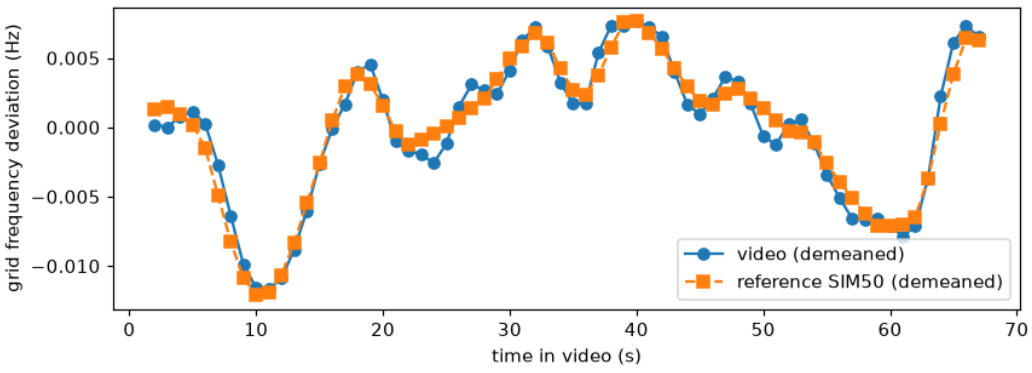

A grid signal is present and matches the reference log at one time. No significant edit evidence was found.

Report state: FINAL

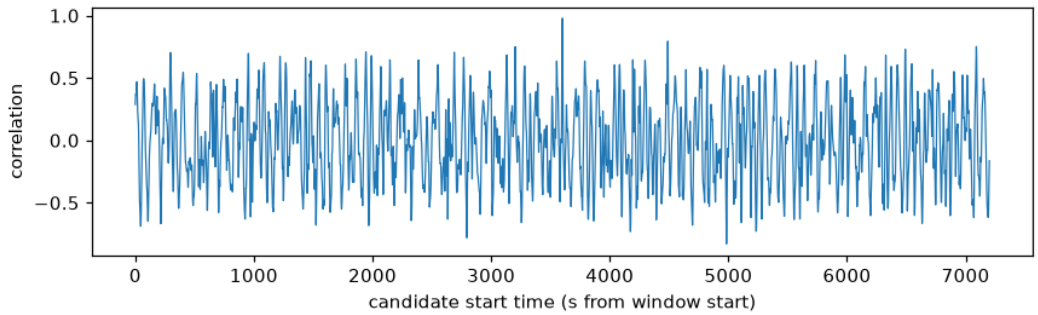

Summary

Estimated recording start (UTC)	2026-01-20T10:00:00.020533+00:00 ± 1.5 s
Grid zone	SIM50
Reasons	• `READOUT_FROM_SIDECAR` — Readout time came from the Capture sidecar. • `MATCH_OK` — The track matches the reference log at one time.
Match	peak correlation 0.979, next peak 0.794, track length 69 s

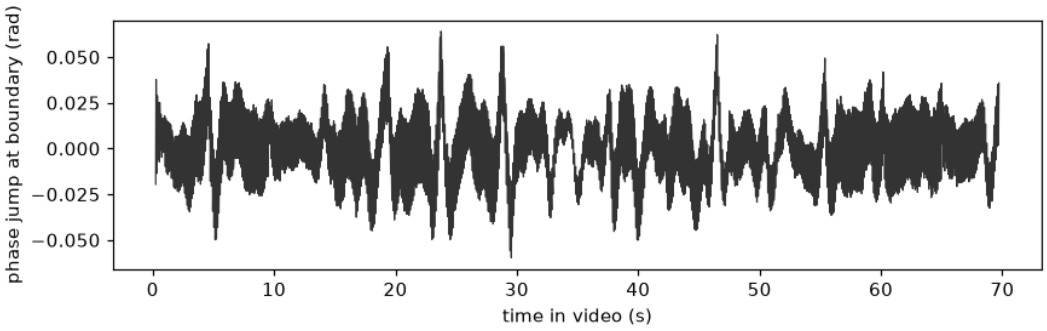

Key plots

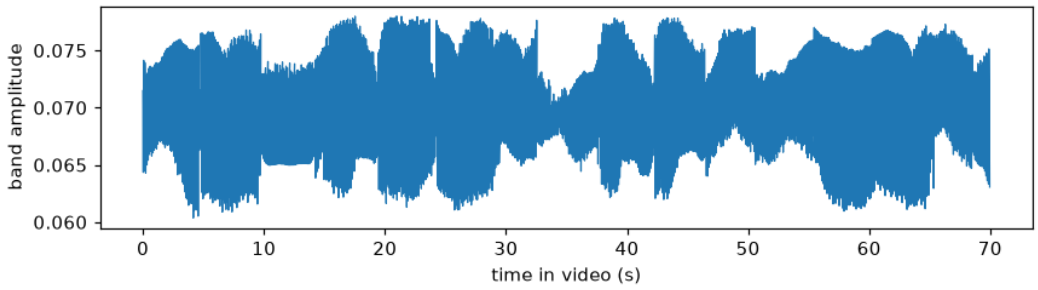

Measured grid frequency variation and matched reference.

Correlation against candidate start times.

Phase jump at frame boundaries. Solid line: edit candidate. Dotted line: timestamp gap.

Flicker band amplitude per frame (fractional modulation).

Limitations

- GRIDPRINT reads the grid frequency from the flicker of mains-powered lights. It is not a deepfake classifier and it is not cryptographic proof.
- A missing signal is never evidence that a video is fake. Many phones hide the flicker ("anti-banding"), and daylight or battery lights do not flicker.
- A time estimate is possible only inside the time range of the reference log for the zone.

- Location output is limited to the grid zone. GRIDPRINT gives no finer location.
- Thresholds come from calibration data. Results outside the calibrated conditions carry more risk of error.
- A CONTRADICTED verdict needs approval by a human reviewer before the report is final.
